

Window Protection For Birds That We Have:

<http://stores.santarosanational.com>

- 1) the filament will stretch somewhat over time. All you do is push down on the lower rod and make a quarter turn to tighten.
- 2) filament works best so as not to block your window view. At certain time of the day, we can't see the filament at all!
- 3) you could buy the materials at a hardware store.
- 4) since we installed the window protection we have had zero collisions!
- 5) it has been very satisfactory.
